

Left-Skewed (Negative Skewness)

In left Skewed data the mean is less than median and the median is less than Mode.

Example:- during a cricket match most of the Players score more than 50 runs.

Right-Skewed (Positive Skewness)

In Right skewed data the mode is less than median and median is less than Mean.

Example:- during a match, most of the players score within 25 to 35 and very few of them could score Well.
